Agriculture grew by 0.04 percent in the third quarter of 2015. There were output increases in the livestock, poultry and fisheries subsectors while bigger losses due to intense heat brought about by El Niño as well as the effects of Typhoons Egay, Hannah and Ineng were registered in the crops subsector. Gross value of production in agriculture amounted to P336.0 billion at current prices, 3.23 percent lower than last year's value. For the period January to September 2015, agriculture grew by 0.65 percent.

The crops subsector which contributed 44.54 percent to the total agricultural production declined by 4.86 percent during the reference period. While improvements in production were noted for banana, pineapple, mango, abaca, cassava, camote, eggplant and calamansi, palay and corn production were heavily affected by hot weather conditions and typhoons. At current prices, the subsector reached P172.4 billion decreasing by 8.09 percent from last year's record. Gross value dropped by 1.69 percent in the first nine (9) months of the year.

The livestock subsector which shared 18.45 percent in total agricultural production grew by 3.25 percent. All components posted increases, with hog as the major contributor growing at 3.76 percent. Gross value of production amounted to P58.5 billion at current prices or 0.74 percent higher from last year. For the period January to September 2015, the growth of the subsector was 3.92 percent.

Production in the poultry subsector expanded by 8.76 percent. The subsector contributed 17.23 percent to the agricultural gross output. Production of chicken grew by 8.77 percent and chicken eggs, by 9.91 percent. Gross value amounted to P47.4 billion at current prices, up by 2.59 percent this year. The subsector's gross value in the first nine (9) months of the year increased by 6.32 percent.

The fisheries subsector managed to grow by 1.80 percent in the third quarter of 2015. It contributed 19.78 percent to total agricultural production. Production increments were recorded for milkfish, tilapia, tiger prawn, skipjack, yellowfin tuna and seaweed. At current prices, the subsector grossed P57.7 billion, representing a 4.18 percent improvement from the same period last year. Gross value of production of the subsector for the period January to September 2015 dropped by 0.36 percent.

Average farmgate prices went down by 3.27 percent during the reference quarter. Prices were notably lower for crops, livestock and poultry subsectors. Prices of the fishery products went up by 2.33 percent this year. For the first nine (9) months of 2015, prices were down by 4.27 percent from last year's levels.

## PERFORMANCE OF PHILIPPINE AGRICULTURE JULY TO SEPTEMBER 2015

### HIGHLIGHTS

**Agriculture grew by 0.04 percent in the third quarter of 2015.** There were output increases in the livestock, poultry and fisheries subsectors while bigger losses due to intense heat brought about by El Niño as well as the effects of Typhoons Egay, Hannah and Ineng were registered in the crops subsector. Gross value of production in agriculture amounted to P336.0 billion at current prices, 3.23 percent lower than last year's value. *For the period January to September 2015, agriculture grew by 0.65 percent.*

**The crops subsector which contributed 44.54 percent to the total agricultural production declined by 4.86 percent during the reference period.** While improvements in production were noted for banana, pineapple, mango, abaca, cassava, camote, eggplant and calamansi, palay and corn production were heavily affected by hot weather conditions and typhoons. At current prices, the subsector reached P172.4 billion decreasing by 8.09 percent from last year's record. *Gross value dropped by 1.69 percent in the first nine (9) months of the year.*

**The livestock subsector which shared 18.45 percent in total agricultural production grew by 3.25 percent.** All components posted increases, with hog as the major contributor growing at 3.76 percent. Gross value of production amounted to P58.5 billion at current prices or 0.74 percent higher from last year. *For the period January to September 2015, the growth of the subsector was 3.92 percent.*

**Production in the poultry subsector expanded by 8.76 percent.** The subsector contributed 17.23 percent to the agricultural gross output. Production of chicken grew by 8.77 percent and chicken eggs, by 9.91 percent. Gross value amounted to P47.4 billion at current prices, up by 2.59 percent this year. *The subsector's gross value in the first nine (9) months of the year increased by 6.32 percent.*

**The fisheries subsector managed to grow by 1.80 percent in the third quarter of 2015.** It contributed 19.78 percent to total agricultural production. Production increments were recorded for milkfish, tilapia, tiger prawn, skipjack, yellowfin tuna and seaweed. At current prices, the subsector grossed P57.7 billion, representing a 4.18 percent improvement from the same period last year. *Gross value of production of the subsector for the period January to September 2015 dropped by 0.36 percent.*

**Average farmgate prices went down by 3.27 percent during the reference quarter.** Prices were notably lower for crops, livestock and poultry subsectors. Prices of the fishery products went up by 2.33 percent this year. *For the first nine (9) months of 2015, prices were down by 4.27 percent from last year's levels.*

## A. VALUE OF PRODUCTION

During the third quarter of 2015, **agriculture** grossed P336.0 billion at current prices. This was 3.23 percent lower than the previous year's record.

The gross value of output in the **crops subsector** amounted to P172.4 billion at current prices. The lower farmgate prices of most commodities in the subsector resulted in the 8.09 percent decline in gross value of output during the period. In the case of palay, both production and price went down, thus, the 27.05 percent drop in its gross value of output. For the same reason, decreases in gross value of production were noted for corn at 8.49 percent, coconut at 3.70 percent and sugarcane at 48.04 percent. Likewise, the cuts in both volume of production and price brought down gross output values from tomato by 26.44 percent, onion by 22.64 percent and rubber by 18.43 percent. Lower prices pulled down gross output values from mango by 5.98 percent, cassava by 1.09 percent, eggplant by 8.54 percent and calamansi by 9.13 percent.

Gainers during the third quarter of 2015 were camote, pineapple, banana and abaca with gross value of output going up by 6.73 percent, 8.98 percent, 11.06 percent and 14.63 percent, respectively. The increases were attributed to expansion in both volume of production and prices during the reference quarter. For similar reason, coffee recovered from last year's negative growth rate and registered an 8.57 percent increment in gross output value. Likewise, tobacco made a turnaround as it recorded a 15.28 percent gain in gross value of output this year due to higher prices. Uptrend in prices pushed up the gross values of outputs from peanut by 8.23 percent and cabbage by 42.37 percent. Mongo registered a 2.12 percent growth in gross value of output due to improvement in production.

The aggregate gross value of "other" crops production increased by 23.24 percent during the period. The main sources of growth were durian, stringbeans and ampalaya.

The **livestock subsector** grossed P58.5 billion at current prices. All components in the subsector contributed to the 0.74 percent increase in

gross value of output. Expansion in both production and prices led to increases in gross value of production from carabao at 3.13 percent, cattle at 1.69 percent, goat at 1.16 percent and dairy at 4.08 percent. Gross value of hog output went up by 0.50 percent due to higher production.

The gross value of **poultry production** amounted to P47.4 billion at current prices. The increased volume of production during the reference quarter resulted in the 2.59 percent growth in the subsector's gross output value. Chicken and chicken eggs grossed higher by 2.03 percent and 4.16 percent, respectively. Gross value of output from duck went up by 6.74 percent and from duck eggs by 4.21 percent due to increments in both production and prices.

The **fisheries subsector** grossed P57.7 billion at current prices. It came up with a 4.18 percent gain from last year's record. Higher volume of production coupled with better prices led to the recovery in gross output values from milkfish by 3.01 percent, from tiger prawn by 12.03 percent, from yellowfin tuna by 13.99 percent and from skipjack by 22.30 percent. Meanwhile, roundscad grossed 5.64 percent more this year as a result of price appreciation.

Lower prices translated to reduced gross value of outputs from tilapia by 2.38 percent and from seaweed by 21.28 percent.

Collectively, the gross value of "other" species production expanded by 2.58 percent.

## **B. VOLUME OF PRODUCTION**

**Agricultural** production increase by 0.04 percent in the third quarter of 2015.

The **crops** subsector which contributed 44.54 percent to total agricultural production contracted by 4.86 percent. Palay output at 2.6 million metric tons was 15.71 percent lower this year. Significant reductions were noted in the volume of production, harvest areas and yield as a result of

unrealized plantings due to inadequate irrigation water, late occurrence of rains and some areas being left in-fallow. Typhoons “Egay” and “Ineng” caused damages in the production areas in CAR, Cagayan Valley and Western Visayas. There were also reports of damages to palay farms because of pest infestation in the province of North Cotabato.

Corn production at 2.4 million metric tons dropped by 1.70 percent in the third quarter of 2015. Farm yield suffered from the adverse effects of Typhoons “Egay, “Hannah” and “Ineng”. In Bicol Region, Western Visayas, Central Visayas, Davao Region and Caraga, harvest areas were reduced due to insufficient water supply and hot weather conditions during planting time.

Coconut production went down by 0.25 percent. The reasons cited included the cutting of old trees in Davao Oriental, Davao del Sur and Davao del Norte, the dry spell in Sarangani and Bohol, and the decrease in the number of bearing trees in Eastern Samar resulting from damages caused by Typhoon “Ruby”. Sugarcane production dropped by a hefty 41.81 percent. In Negros Occidental, there was a notable decrease in area harvested for canes intended for centrifugal sugar production because of dry spell. Moreover, the dry spell caused stunted canes which were harvested in Negros Oriental.

Banana production expanded by 2.98 percent. Increases in area harvested were cited in Central Luzon, Davao Region and ARMM. Production in CALABARZON and Bicol Region recovered from the damages caused by Typhoon “Glenda” and in Central Visayas from Typhoon “Yolanda”. Additional bearing hills were harvested in Western Visayas, Zamboanga Peninsula and Northern Mindanao as a result of the DA-LGUs’ provision of tissue-cultured seedlings. Moreover, bigger fruits were harvested in Ilocos Region, Cagayan Valley, Central Luzon and Eastern Visayas. This was attributed to good soil moisture and less occurrence of calamities during the period. In MIMAROPA, higher yield was noted due to favorable weather conditions during the crop’s fruiting stage.

Pineapple production grew by 5.84 percent. Notable expansion of corporate farms was recorded in Eastern Visayas and Northern Mindanao.

Production in Zamboanga Peninsula increased in response to higher demand for pineapple. In Bicol Region, favorable weather conditions contributed to the production gain.

Coffee recovered from last year's slump and came up with 1.73 percent growth in production. In Surigao del Sur, farm productivity in terms of berries harvested per tree improved as a result of technical assistance extended to farmers by Nestle Philippines and DA-LGUs. Increases in the number of bearing trees were observed in Sultan Kudarat and Agusan del Sur. Mango production expanded by 8.85 percent. Better harvests were noted in Eastern Visayas due to application of organic fertilizer. In CALABARZON, there were reports that mango farms had second fruiting harvests because of the hot weather conditions which enhanced the crop's fruit development. Also, additional bearing trees were noted in Central Visayas. In Zamboanga Peninsula and Caraga, more trees were induced due to good sunny weather that prevailed during the period. Natural and better fruiting pushed up production of mango in Western Visayas. Favorable weather conditions induced more stripping of abaca which resulted in the 5.36 percent production growth during the third quarter of the year. Further, higher demand and good price of abaca fibers were reported in Agusan provinces, Surigao del Sur, Aklan and Catanduanes.

Production of mungo went up by 2.33 percent. Increases in area planted and harvested coupled with better prices and lesser bean fly infestation were noted in Ilocos Region, Cagayan Valley, MIMAROPA, Northern Mindanao, SOCCSKSARGEN and Caraga. In Eastern Visayas, more areas were harvested as a result of the financial assistance extended by LGUs, DOLE and NGOs to the farmers. Moreover, newly-opened areas were reported in the province of Laguna. Cassava continued its production uptrend and registered a 7.29 percent output expansion this quarter. Notable increases in harvest areas were reported in CAR, Ilocos Region, Cagayan Valley, Central Luzon, Western Visayas, Northern Mindanao, Davao Region, SOCCSKSARGEN and Caraga. In Bicol Region and Central Visayas, production gain was brought about by the usage of high yielding varieties. Sufficiency of water from the previous quarters boosted the crop's tuber formation in CALABARZON. The LGU's support in terms of providing planting materials resulted in higher output in MIMAROPA and

Zamboanga Peninsula. The sustained higher demand for cassava-based native delicacies encouraged more farmers to cultivate cassava farms in Eastern Visayas.

Camote was another gainer with its 1.18 percent output growth during the quarter. This was the result of increased usage of high yielding varieties called “Bereau” in Central Luzon. In CALABARZON, the intermittent rains which enhanced tuber formation were complemented by lesser occurrence of “weevil”. The high market demand in Eastern Visayas and good price in Zamboanga Peninsula motivated farmers to plant, thus, the increase in harvested areas of camote in these regions. Eggplant production increased by 1.60 percent. The continuous seedling distribution program in Cagayan Valley, CALABARZON, Western Visayas, Northern Mindanao, SOCCSKSARGEN and Caraga resulted in expansion in area harvested during the quarter. Calamansi farmers produced 3.39 percent more this year. This was attributed to increases in yield in MIMAROPA, Western Visayas and ARMM because of favorable weather conditions during the crop’s development stage. The use of organic fertilizer led to the development of bigger fruits in Central Luzon, Eastern Visayas and Zamboanga Peninsula. There were reports of recovery from Typhoons “Glenda” in CALABARZON and Bicol Region and “Yolanda” in Eastern Visayas and this significantly contributed to calamansi’s good performance during the quarter.

Tomato production dropped by 1.21 percent. Bad weather conditions affected the crop’s growth in CAR, CALABARZON, Bicol Region, Western Visayas, Northern Mindanao, Caraga and ARMM, resulting in reduced harvest areas. Another loser was onion which posted a 20.00 percent drop in production. Onion farmers hesitated to plant because of the anticipated dry spell in Central Visayas. Insufficiency of rain adversely affected onion production in the province of South Cotabato and in Zamboanga Peninsula. Most onion areas in Nueva Vizcaya were left in-fallow. The warm weather conditions in Isabela slowed down the crop’s growing stage. Cabbage suffered a 6.80 percent contraction in output. The decrease in area harvested in CAR was due to Typhoon “Ineng”. Crop shifting to eggplant, incidence of cutworm, along with hot weather conditions, affected head formation in CALABARZON.

Rubber production went down by 6.21 percent. In North Cotabato, there was lesser tapping of rubber trees due to dry spell coupled with low buying price of cup lump. On the other hand, tapping activities in Zamboanga Sibugay were adversely affected by occurrence of frequent rains.

Collectively, production of “other” crops recovered from last year’s loss and grew by 3.19 percent this quarter. Major contributors to the growth among other vegetables were stringbeans, squash fruit and gabi. Output gains were the results of favorable weather conditions, good agricultural practices and higher demand for these crops. For fruits, durian and lanzones producers reported better fruiting and peaking of harvests during the quarter. Another contributor was palm oil as more fruits were harvested in Agusan del Sur due to higher usage of fertilizer and proper management. Additional bearing trees were noted in North Cotabato.

The **livestock subsector** expanded by 3.25 percent. It contributed 18.45 percent to total agricultural production. Carabao production inched up by 0.46 percent as more animals were slaughtered in most regions during the reference quarter. Cattle recorded a 1.06 percent gain in output. The sustained high demand from local meat establishments in most regions encouraged increased animal slaughtering. Hog production grew by 3.76 percent. There were increases in the number of animals slaughtered in most producing regions, like Central Luzon and CALABARZON during the quarter. The high demand for goat meat during the celebration of “Eid’l Adha” resulted in higher disposition of goats for slaughtering, thus the 0.49 percent increase in production. Dairy output went up by 2.89 percent.

The **poultry subsector** recorded an 8.76 percent gain in production and accounted for a 17.23 percent share in the total agricultural production during the reference period. Chicken production which substantially contributed to the subsector’s growth expanded by 8.77 percent. The improvement in broiler and native chicken production was traced to the expansion in operations by broiler integrators which resulted in the increased number of birds dressed in dressing plants. Recovery from the damages caused by Typhoon “Glenda” was also noted in CALABARZON. Duck production went up by 1.22 percent. Bigger volume of disposition of duck meat was reported in Ilocos Region, CALABARZON, MIMAROPA,

Western Visayas, Zamboanga Peninsula, Northern Mindanao and Davao Region. Chicken egg production rose by 9.91 percent. This was attributed to the recovery from the adverse effects of Typhoon “Glenda” by some layer-breeder commercial farms which resumed operations during the third quarter. Expansion of commercial layer farms in Ilocos Region and MIMAROPA was also reported. Duck egg production was up by 1.01 percent. Increased production was registered for mallard ducks for “balut” and salted eggs. Higher egg production was attributed to the improved good egg-laying efficiency ratio during the reference quarter.

The **fisheries subsector** produced 1.80 percent more output this quarter. It accounted for 19.78 percent of the total agricultural production. Milkfish production went up by 0.80 percent. The availability of good quality fingerlings led to increases in area harvested in Davao del Sur. Favorable weather conditions and lesser seepage of chemicals from nearby palay farms boosted milkfish output from brackishwater fishponds in Northern Mindanao. Also, the Bureau of Fisheries and Aquatic Resources (BFAR) distributed more quality fingerlings in Lanao del Norte. Increased stocking rate for marine cages was reported in Misamis Oriental. Tilapia production moved up by 0.85 percent. Bigger sizes of tilapia were caught in Lake Lanao and Liguasan Marsh while aquaculture operators were encouraged to produce more fish in pens and cages in Buluan Lake because of higher demand. In Rizal, more natural foods were available due to movement of water caused by frequent rains and this enhanced the taste and growth of tilapia from both pens and cages. An increase in stocking rate, attributed to BFAR assistance, was noted in Pampanga. Availability of good quality fingerlings and good culture management resulted in lesser mortality rate in Tarlac.

Tiger prawn production recovered from last year’s slump with a 2.16 percent increment this quarter. This achievement was due to availability of stocking materials and adequate supply of commercial feeds in Mindoro Oriental, the expansion of tiger prawn operators in Palawan and lesser mortality rate due to minimal incidence of luminous bacteria in Lanao del Norte. Production of skipjack continued its uptrend and went up by 15.88 percent during the period. More unloadings of frozen tuna for canneries were reported in the landing centers in General Santos City. In

CALABARZON, the increased appearance of school of fish was due to abundance of small species that served as feeds to large species like skipjack. Production of yellowfin tuna was 6.67 percent higher this year. Increased fishing efforts due to sustained demand from canneries were cited in General Santos City. Seaweed production grew by 1.22 percent. In the provinces of Palawan, Zamboanga City, Zamboanga del Sur and Sulu, the availability of planting materials under the BFAR assistance program encouraged more operators to plant. The prevailing good weather conditions and less occurrence of ice-ice disease favored seaweed production in Zamboanga Sibugay and Tawi-tawi.

Roundscad production dropped by 4.47 percent. The decrease in unloadings in Navotas Fish Port was caused by the banning of unloadings of commercial fishing vessels using Danish seine fishing gear. The occurrence of low pressure areas, gale warnings and frequent rains during the third quarter prevented fishermen in Masbate and Camarines provinces from fishing in municipal waters.

Production of “other species” in the fisheries subsector went up by 0.83 percent. Gains in production of Indian sardines, Indian mackerel, big-eyed scad, Eastern little tuna and threadfin bream were manifested by increased appearances of these species due to favorable weather conditions.

### **C. FARMGATE PRICES**

On the average, farmgate prices went down by 3.27 percent in the third quarter of 2015.

The **crops subsector** posted an average price decrease of 3.39 percent. Lesser trading activity pulled down the price of palay by 13.46 percent. Price of corn was 6.91 percent lower this year due to low demand for white corn.

Prices of banana and pineapple were in the uptrend with this year’s gains of 7.84 percent and 2.97 percent, respectively. There was sustained market demand for both commodities. The same reason was cited for the

6.72 percent price hike of coffee. Tobacco made a turnaround and recorded a 15.28 percent increase this year and this was traced to lower volume of stocks. The increasing world market price resulted in the 8.80 percent gain in the price of abaca. Lower production pushed up the price of cabbage by 52.75 percent. Increases in the prices of peanut at 8.23 percent and camote at 5.49 percent were due to sustained demand from processors and end users.

There was a 3.46 percent drop in the price of coconut because of lower world market price of coconut by-products. Sugarcane price decreased by 10.71 percent. The decreasing world market price caused the 13.04 percent contraction in the price of rubber. With higher production during this quarter, prices went down by 13.63 percent for mango and 12.10 percent for calamansi. Tomato price continued its downtrend with a 25.54 percent decrease this year due to inferior quality of fruits produced. Cutbacks in prices were registered for eggplant at 9.98 percent, cassava at 7.81 percent and mongo at 0.21 percent and these were largely due to higher production. Onion and garlic recorded price decreases of 3.30 percent and 58.62 percent, respectively due to higher volume of stocks.

In the **livestock subsector**, prices went down by an average of 2.43 percent. This was attributed to the 3.14 percent drop in the price of hog caused by higher production. The sustained market demand pushed up the prices of carabao by 2.66 percent, cattle by 0.63 percent and goat by 0.67 percent. Dairy price grew by 1.16 percent.

Prices in the **poultry subsector** declined by an average of 5.67 percent. Higher production brought down the price of chicken by 6.20 percent and chicken eggs by 5.23 percent. Price of duck meat increased by 5.45 percent because of sustained demand from eateries. Likewise, the price of duck eggs was up by 3.17 percent due to sustained demand for “balut” and salted eggs.

The **fisheries subsector** bounced back from last year’s price cuts and registered an average price increase of 2.33 percent. The price hike of 2.19 percent for milkfish was attributed to bigger sizes of harvests. High demand from hotels and restaurants led to the 9.66 percent improvement

in the price of tiger prawn. Bigger sizes and good quality of roundscad resulted in the price increment of 10.60 percent. The 5.56 percent increment in the price of skipjack was influenced by the increasing world market price. Price of yellowfin tuna was up by 6.87 percent due to sustained demand. Meanwhile, the drop in the price of tilapia by 3.20 percent could be attributed to the higher volume of production. Seaweed price was down by 22.24 percent because of low buying price from traders due to poor quality of harvests.

Table 1. Value of Production in Agriculture at Constant Prices,  
Philippines, 2013 - 2015  
( in million pesos)

SUBSECTOR	July-September			January-September		
	2013	2014	2015	2013	2014	2015
