**PERFORMANCE OF PHILIPPINE AGRICULTURE
OCTOBER TO DECEMBER 2016**

Agriculture contracted by 1.11 percent in the fourth quarter of 2016. The devastating effects of Typhoons “Karen” and “Lawin” pulled down production in the crops and fisheries subsectors. Meanwhile, the livestock and poultry subsectors posted output increments. At current prices, gross value of agricultural production amounted to P456.4 billion or 1.35 percent higher than the previous year’s record. The annual performance of agriculture was marked by a 1.41 percent decline in output in 2016.

The crops subsector posted a 2.62 percent contraction in output in the fourth quarter of 2016. It contributed 50.98 percent to the total agricultural production. Palay and corn production contracted by 3.62 percent and 0.15 percent, respectively. Production gains were noted among banana, pineapple, abaca, peanut, cassava, sweet potato, tomato, eggplant and calamansi. Output losses were recorded by coconut, sugarcane, coffee, mango, tobacco, mongo, onion, cabbage and rubber. The subsector grossed P268.8 billion at current prices, up by 2.61 percent from last year’s record. For the whole year of 2016, crop production decreased by 3.32 percent.

Production in the livestock subsector expanded by 3.41 percent in the fourth quarter of 2016. It accounted for 17.85 percent of the total agricultural output. Except for goat, all components of the subsector registered output increments. Gross value of production amounted to P74.5 billion, representing a 3.49 percent growth over last year’s record. The subsector grew by 4.59 percent in 2016.

The poultry subsector produced 1.00 percent more output in the fourth quarter of 2016. It shared 15.03 percent in the total agricultural output. Production of chicken and duck eggs increased by 1.68 percent and 7.40 percent, respectively. At current prices, the subsector grossed P51.2 billion or 4.27 percent less than previous year’s record. For the period January to December 2016, the subsector grew by 1.39 percent.

Production in the fisheries subsector declined by 2.95 percent in the fourth quarter of 2016. It contributed 16.14 percent to the total agricultural output. Among the subsector’s components, only milkfish recorded an output increase at 5.37 percent during the period. At current prices, the gross value of fisheries production amounted to P61.8 billion, down by 1.59 percent from last year’s earnings. For 2016, the subsector recorded a 4.18 percent drop in production.

On the average, farmgate prices increased by 2.49 percent in the fourth quarter of 2016. Price increments were registered in the crops subsector at 5.37 percent, livestock subsector at 0.08 percent and fisheries subsector at 1.40 percent. On the other hand, the poultry subsector posted an average price reduction of 5.22 percent. On an annual basis, prices received by farmers went up by an average of 3.36 percent.

PERFORMANCE OF PHILIPPINE AGRICULTURE OCTOBER TO DECEMBER 2016

HIGHLIGHTS

Agriculture contracted by 1.11 percent in the fourth quarter of 2016. The devastating effects of Typhoons “Karen” and “Lawin” pulled down production in the crops and fisheries subsectors. Meanwhile, the livestock and poultry subsectors posted output increments. At current prices, gross value of agricultural production amounted to P456.4 billion or 1.35 percent higher than the previous year’s record. *The annual performance of agriculture was marked by a 1.41 percent decline in output in 2016.*

The crops subsector posted a 2.62 percent contraction in output in the fourth quarter of 2016. It contributed 50.98 percent to the total agricultural production. Palay and corn production contracted by 3.62 percent and 0.15 percent, respectively. Production gains were noted among banana, pineapple, abaca, peanut, cassava, sweet potato, tomato, eggplant and calamansi. Output losses were recorded by coconut, sugarcane, coffee, mango, tobacco, mongo, onion, cabbage and rubber. The subsector grossed P268.8 billion at current prices, up by 2.61 percent from last year’s record. *For the whole year of 2016, crop production decreased by 3.32 percent.*

Production in the livestock subsector expanded by 3.41 percent in the fourth quarter of 2016. It accounted for 17.85 percent of the total agricultural output. Except for goat, all components of the subsector registered output increments. Gross value of production amounted to P74.5 billion, representing a 3.49 percent growth over last year’s record. *The subsector grew by 4.59 percent in 2016.*

The poultry subsector produced 1.00 percent more output in the fourth quarter of 2016. It shared 15.03 percent in the total agricultural output. Production of chicken and duck eggs increased by 1.68 percent and 7.40 percent, respectively. At current prices, the subsector grossed P51.2 billion or 4.27 percent less than previous year’s record. *For the period January to December 2016, the subsector grew by 1.39 percent.*

Production in the fisheries subsector declined by 2.95 percent in the fourth quarter of 2016. It contributed 16.14 percent to the total agricultural output. Among the subsector’s components, only milkfish recorded an output increase at 5.37 percent during the period. At current prices, the gross value of fisheries production amounted to P61.8 billion, down by 1.59 percent from last year’s earnings. *For 2016, the subsector recorded a 4.18 percent drop in production.*

On the average, farmgate prices increased by 2.49 percent in the fourth quarter of 2016. Price increments were registered in the crops subsector at 5.37 percent, livestock subsector at 0.08 percent and fisheries subsector at 1.40 percent. On the other hand, the poultry subsector posted an average price reduction of 5.22 percent. *On an annual basis, prices received by farmers went up by an average of 3.36 percent.*

A. VALUE OF PRODUCTION

In the fourth quarter of 2016, the gross value of **agricultural production** amounted to P456.4 billion at current prices. This was 1.35 percent higher than the previous year's record.

The **crops subsector** grossed P268.8 billion at current prices or 2.61 percent more this year. Gross receipts from palay and corn production contracted by 3.85 percent and 8.08 percent, respectively. This was attributed to the decreases in both production and prices during the period.

Gains in the gross values of production due to price hikes were recorded for coconut at 20.06 percent, coffee at 14.83 percent and mango at 11.88 percent. Similarly, higher prices caused the significant growth in the gross value of rubber output at 35.85 percent. Improvements in the volume of production coupled with higher prices contributed to the increases in gross values of production of cassava by 18.87 percent and banana by 10.08 percent. The same reason was behind the expansion in the gross values of outputs of calamansi by 29.06 percent, pineapple by 18.33 percent, sweet potato by 16.89 percent, abaca by 16.81 percent, and eggplant by 16.57 percent.

Lower prices pulled down the gross receipts from tomato by 19.30 percent and peanut by 0.12 percent during the period. Reduction in volume of production and price cuts resulted in the drop in the gross earnings from cabbage by 20.80 percent, sugarcane by 15.90 percent, onion by 13.91 percent and mungo by 4.77 percent. Tobacco grossed lower by 5.57 percent because of production decline during the year.

Collectively, the gross value of "other crops" expanded by 14.53 percent in the fourth quarter of 2016.

The gross value of output in the **livestock subsector** amounted to P74.5 billion at current prices. All livestock components contributed to the 3.49 percent increase in the gross earnings of the subsector. The combined increases in production and prices pushed up gross output values of dairy by 15.88 percent, cattle by 7.88 percent and carabao by 6.28 percent. Higher volume of production led to the 2.74 percent gain in the gross earnings of hog. Price appreciation brought up the gross receipts from goat by 3.82 percent.

In the **poultry subsector**, gross value of production amounted to P51.2 billion at current prices, or 4.27 percent lower than the previous year's record. Chicken recorded a 7.73 percent decline in gross output value because of

price cut. The declining volume of production pulled down the gross receipts from duck by 12.73 percent. On the other hand, gross earnings from duck eggs increased by 9.45 percent because of higher production and prices. The uptrend in the gross receipts of chicken eggs at 7.55 percent was triggered by price increments.

The **fisheries subsector** grossed P61.8 billion at current prices and posted a 1.59 percent contraction during the period. Lower production levels and reduced prices led to the drop in the gross receipts for seaweed by 18.36 percent, skipjack by 14.20 percent, roundscad by 11.02 percent and tilapia by 9.46 percent. Production shortfalls triggered the continuous contraction in the gross earnings for yellowfin tuna by 21.78 percent.

Meanwhile, tiger prawn made a turnaround with 11.23 percent expansion in the gross receipts due to higher price. Milkfish recorded a gain of 2.29 percent in the gross earnings because of increased production.

The aggregate gross value of production of “other” fish species recovered from previous year’s negative growth and posted a 2.62 percent increment this quarter.

B. VOLUME OF PRODUCTION

Agriculture was adversely affected by Typhoons “Karen” and “Lawin” which resulted in the 1.11 percent contraction in the sector’s output in the last quarter of 2016. For the whole year of 2016, agricultural output was down by 1.41 percent.

The **crops** subsector which shared 50.98 percent in the total agricultural production contracted by 2.62 percent in the fourth quarter of 2016. Palay production at 7.01 million metric tons was 3.62 percent lower than last year’s record. This was traced to the reduction in area harvested due to Typhoons “Karen” and “Lawin” in Cagayan Valley and Bicol Region. There were also reports of unrealized plantings in the provinces of Isabela, Misamis Oriental and Misamis Occidental as a result of inadequate irrigation water. Typhoons “Karen” and “Lawin” negatively affected palay yield in the Luzon regions. In Central Visayas and Eastern Visayas, area harvested to palay was lower due to excessive rainfall during the planting period. There were also reports of lower fertilization usage in Central Visayas. In Zamboanga Peninsula, palay production decreased because of rat infestation and occurrence of “tungro” and red blight.

In the fourth quarter of 2016, corn production at 1.73 million metric tons dropped by 0.15 percent. The adverse effects of Typhoons “Karen” and “Lawin” resulted in the contraction in area harvested for corn in CAR, Cagayan Valley and Bicol Region. There were areas in Cagayan Valley that were left in-fallow during the period. Excessive rains during the plant’s vegetative stage adversely affected corn yield in Negros Island Region (NIR). In SOCCSKSARGEN, some areas were affected by rats and stalk rot.

Coconut output was down by 5.22 percent. Coconut trees were still reeling from the effects of dry spell in the previous quarters of the year which resulted in smaller nuts harvested in the provinces of Zamboanga del Norte, Davao Oriental and Davao del Sur. In SOCCSKSARGEN, the dry spell caused lower volume of nuts harvested as rat infestation was also noted during the fruits’ development stage. Sugarcane production contracted by 15.04 percent. The dry spell in the previous quarters led to lower volume of canes harvested and delayed milling activities in Northern Mindanao. In NIR, harvests were adversely affected by heavy rains in the last quarter of 2016.

Banana production grew by 1.57 percent. There were increases in the number of bearing hills harvested because of higher demand, particularly, for the Cavendish type of banana from the corporate farms in Davao Region, SOCCSKSARGEN, and Northern Mindanao. Pineapple was another gainer as output increased by 1.37 percent in the fourth quarter of 2016. There was expansion in area harvested from corporate farms in Northern Mindanao. In addition, bigger fruits were harvested in SOCCSKSARGEN due to recovery from the dry spell in the previous quarters of the year. Bigger fruits were also harvested in CALABARZON because of adequate rainfall during the fruit development.

Abaca production was higher by 1.69 percent than its previous year’s record. There were reports that increased stripping activities were encouraged by the better prices of fiber that prevailed in Bicol Region and Caraga. In Eastern Visayas, the production increase was traced to the crop’s recovery from bunchy top disease. This was part of the Fiber Industry Development Authority’s (FIDA) Rehabilitation Program in the region. Peanut production inched up to 0.79 percent. Sufficiency of soil moisture contributed to the development of more peanut pods in Central Visayas and Zamboanga Peninsula. There were also reports of crop shifting from corn to peanut in Negros Oriental.

Cassava came up with a 2.28 percent expansion in output. There were increases in area harvested in Northern Mindanao and Zamboanga Peninsula

due to higher demand for feeds and other industrial uses of cassava. In Caraga, bigger sizes of tubers were harvested during the quarter. Production of sweet potato increased by 4.65 percent. Bigger sizes of tubers were harvested due to sufficient soil moisture during the crop's tuber formation in Central Visayas and Caraga. Tomato production improved by 4.15 percent as a result of increase in area planted which was encouraged by the high demand coupled by the provision of fertilizer support by the Local Government Unit (LGU) in Northern Mindanao. There was also a seed distribution program in Misamis Oriental by the LGU. In Central Luzon, the increase in yield in tomato farms was explained by the intensified planting density and sufficiency of water during the period.

Eggplant production grew by 2.00 percent. The seed distribution program of the Department of Agriculture (DA) through the LGU greatly contributed to higher production in Caraga. Eggplant producers in Central Visayas reported more fruits harvested due to sufficient soil moisture during the period. Calamansi production went up by 1.81 percent. There were more fruits harvested per tree in Zamboanga Peninsula and Caraga. Meanwhile, proper maintenance like higher usage of fertilizers and pruning supported by moderate rains during the plant's flowering stage resulted in the improved production of calamansi in CALABARZON.

Coffee production dropped by 3.25 percent. The coffee trees in Kalinga were toppled down by Typhoon "Lawin". There were also reports of cutting down of old and unproductive trees in the provinces of Zamboanga del Norte and Compostela Valley. Mango production decreased by 7.70 percent. There was a reduction in the number of trees induced in Zamboanga Peninsula and Central Visayas as many mango contractors and inducers anticipated the rainy weather conditions during the period. Mango output slid by 0.32 percent. Production in Sulu dropped as lesser areas were planted to mango because of unstable peace and order situation. The unfavorable weather conditions that prevailed in Basilan reduced mango production during the last quarter of 2016. Production of onion contracted by 4.90 percent. This was the result of delayed planting and harvesting of the so-called native onion in Ilocos Region. Limited planting materials resulted in lower production in Ilocos Sur. There were also reports that some areas planted to onion in Ilocos Region were submerged in water due to Typhoon "Lawin".

Typhoon "Lawin" adversely affected cabbage areas in CAR, thus, the drop of 3.36 percent in production. Tobacco farms produced 15.79 percent less output during the quarter. Lesser areas were devoted to production of native tobacco

in Misamis Oriental. Rubber recorded a 1.20 percent drop in production and this was attributed to the low buying price which discouraged tapping activities in Zamboanga del Sur.

Collectively, production of “other” crops grew by 1.35 percent. In Davao City, cacao production was higher as more fruits were harvested attributed to bigger crowns. For vegetables, higher production were recorded for okra with increases in area harvested and yield due to seed distribution program of the LGU in Northern Mindanao and Bicol Region.

The **livestock** subsector produced 3.41 percent more output during the fourth quarter of 2016. It contributed 17.85 percent to total agricultural production. Carabao production increased by 1.77 percent. Significant increases were noted in the disposal of fatteners which was triggered by the high demand for carabeef in Cagayan Valley, CALABARZON, MIMAROPA, Bicol Region, Western Visayas, Central Visayas, Eastern Visayas, Negros Island Region (NIR), Zamboanga Peninsula and Northern Mindanao. Increases in the number of animals sold for slaughter were reported in MIMAROPA, Eastern Visayas and Northern Mindanao. Cattle production expanded by 1.83 percent. More animals were disposed for slaughter due to increased demand from households and Hotel and Restaurant Industries (HRIs) during the period. Higher price also encouraged more disposal of stocks in Western Visayas, NIR, Eastern Visayas and Northern Mindanao. In addition, there were increases in the number of animals sold live for slaughter.

Hog production went up by 3.84 percent. The high demand contributed to the increase in the number of hogs sold live for slaughtering in most regions. Expansion of commercial farms was reported in Ilocos Region and Davao Region.

Goat production was lower by 1.17 percent than last year’s level. The dry spell in the previous quarters resulted in the stunted growth of animals, thus, the lower volume of stocks of marketable sizes available for disposal in Central Luzon and SOCCKSARGEN. Less slaughtering of animals was noted as stocks were reserved for breeding purposes in Ilocos Region.

Dairy production went up by 6.68 percent. Notable increases of dairy animals on the milkline coupled with higher prices for milk from both caracows and cows during the period were reported.

The **poultry** subsector with its 15.03 percent contribution to total agricultural production grew by 1.00 percent in the fourth quarter of 2016. Chicken production went up by 1.68 percent. This was the result of the “twice”

harvesting practice of chicken farms as encouraged by high demand. Production increases in the newly opened broiler farms from San Miguel Corporation (SMC) and Bounty Fresh were noted in Western Visayas. In Eastern Visayas, there were reports of increased number of contract growers as well as the opening of new dressing plant in the region.

Duck meat production declined by 15.15 percent. This was the result of closures of some commercial farms in Ilocos Region and Caraga. There were also cases of less and selective culling and disposal of stocks for eggs and breeding purposes in other regions.

Chicken egg production slid by 0.89 percent. This was traced to the decreases in laying flock inventory due to tight supply of ready- to- lay pullets and lower egg-laying efficiency ratio.

Duck egg production expanded by 7.40 percent as a result of higher inventory of laying flock in addition to the opening of new farms in Camiguin and Davao del Norte. Expansion of farms in SOCCSKSARGEN was likewise reported.

The **fisheries** subsector recorded a 2.95 percent contraction in output. It accounted for a 16.14 percent share in the total agricultural production. Milkfish production expanded by 5.37 percent. The availability of fingerlings, increased feeding rate and proper feeding management resulted in higher stocking density in Ilocos Sur. The rehabilitation of dikes among fishponds and the higher survival rate of fingerlings were cited in the province of Quezon. The availability of stocking materials in Iloilo also contributed to the production uptrend in milkfish.

Tilapia production dropped by 3.49 percent. The devastating effects of Typhoon “Lawin” in Isabela and Cagayan caused reduction in area harvested and smaller sizes of harvests. Some tilapia ponds in Bukidnon had no harvests during the period due to delay in stocking. Typhoon “Lawin” also brought down production of tiger prawn by 0.63 percent. Smaller sizes of harvests and high mortality rate due to turbid water was observed in Pangasinan. Low survival rate brought about by sudden change of climate during the post larvae stage was reported in Aklan. Roundscad production was down by 2.24 percent. Lesser fishing days were reported in Quezon due to drydocking activities during the period. Fishing days in Sulu and Iloilo were limited because of unfavorable weather conditions. In Antique, there was reduced appearance of fish in the “payaos”.

Skipjack production was down by 10.72 percent. Lower volume of unloadings of frozen skipjack was cited in South Cotabao. In the National Capital Region

(NCR), the high operational costs limited the fishing trips during the period. The notable 30.29 percent decline in yellowfin tuna production could be traced to lesser appearance of this species in the fishing ground and conservation measure imposed by Western and Central Pacific Fisheries Commission (WCPFC) in the high seas. The prevailing bad weather conditions resulted in limited fishing days during the last quarter of 2016.

Seaweed production went down by 9.74 percent. There was no production of cottonii variety in Quezon due to its susceptibility to ice-ice disease. In Palawan, the decrease in yield was brought about by lesser farm operations and shifting of some farmers to other forms of livelihood. There were also reports of reduction in available stocking materials because of incidence of ice-ice and epiphytes in Antique.

Production of “other” species went down by 1.66 percent. A production downtrend was noted for Indian sardines as the fishing ban in Zamboanga Peninsula was being strictly followed from November 2016 to February 2017 by big fishing operators. The scarce appearance of Indian mackerel coupled with drydocking activities of big commercial operators resulted in limited fishing days during the period.

C. FARMGATE PRICES

During the fourth quarter of 2016, prices received by farmers went up by an average of 2.49 percent.

The **crops subsector** bounced back from last year’s price cut and registered an average increment of 5.37 percent this year. Price of palay continued its downtrend with a 0.24 percent reduction this year. This was attributed to low quality of grains harvested due to the devastating effects of Typhoons “Karen” and “Lawin”. Similarly, corn recorded another drop in price by 7.94 percent due to poor quality and lesser demand for the product.

Coconut recovered from last year’s lower price and posted a 26.67 percent gain in price this period as a result of lower production. For the same reason, there were increases in the prices of coffee at 18.69 percent and tobacco at 12.14 percent. Sustained demand and higher buying price from traders pushed up the price of abaca by 14.86 percent. Price of rubber went up by 37.50 percent due to the reduction in the volume of production and increasing world market prices. There was an 8.38 percent increment in the price of banana because of sustained high demand for processing and for food consumption. The good quality of fruits harvested coupled with higher demand

for processing led to the 16.73 percent expansion in the price of pineapple. Price of mango increased by 21.21 percent and this was attributed to the declining volume of production. Sustained demand for calamansi pushed up its price by 26.77 percent. Price hike for cassava by 16.22 percent was a result of sustained demand for food as well as for industrial processing use. Sweet potato price went up by 11.70 percent due to sustained demand for food and processing. A notable 58.78 percent price gain was reported for garlic because of sustained demand. Similar condition was noted for eggplant which recorded a 14.29 percent price increment.

Sugarcane price declined by 1.01 percent. Reductions in prices were observed for peanut at 0.90 percent and mungo at 4.47 percent due to lower demand. The 22.51 percent drop in the price of tomato was attributed to increase in the volume of production. Price of onion contracted by 9.48 percent as smaller bulb of onions were produced during the period. Inferior quality of head produced led to the 18.05 percent cut in the price of cabbage.

In the **livestock subsector**, prices inched up by an average of 0.08 percent. Prices of carabao and cattle grew by 4.43 percent and 5.94 percent, respectively because of sustained demand for meat. For the same reason, the price of goat increased by 5.05 percent. Dairy price went up by 8.63 percent and this was brought about by high buying price for the processors. The higher production during the quarter led the price of hog to drop by 1.06 percent.

Prices in the **poultry subsector** declined by an average of 5.22 percent. Price of chicken contracted by 9.26 percent as a result of expansion in production. Meanwhile, lower production pushed up the price of duck meat by 2.85 percent and chicken eggs by 8.51 percent. A price gain of 1.90 percent was recorded for duck eggs due to higher demand for “balut” and salted eggs.

In the **fisheries subsector**, prices grew by an average of 1.40 percent. Price of tiger prawn went up by 11.94 percent because of production shortfall and sustained demand from restaurants. Lower production caused the 12.21 percent price hike in yellowfin tuna. More production pulled down the price of milkfish by 2.92 percent. Poor quality of harvested tilapia caused the 6.19 percent cut in price. Roundscad was priced 8.98 percent lower this quarter due to smaller sizes of catch. Likewise, the smaller sizes of catch led to the 3.90 percent reduction in the price of skipjack. Seaweed price went down by 9.55 percent and this could be explained by the low buying price of traders.

Table 1. Value of Production in Agriculture at Constant Prices, Philippines, 2014-2016
(in million pesos)

SUBSECTOR	October-December			January-December		
	2014	2015	2016	2014	2015	2016
CROPS	117,649.22	114,371.19	111,377.17	405,581.16	397,532.72	384,340.42
